Range of Motors:
dSKgw (Water Cooled)

AVAILABLE FRAME SIZE

OUTPUT RANGE: 180 - 500 kW

dSKgw motors are used for driving the mining organ of combined-cutter-loaders and conveyors under extremely tough conditions in underground headings with class "a", "b", "c" of a methane explosion danger and class "A" and "B" of a coal dust explosion danger. The motors of this range are three-phase squirrel cage induction motors in the explosion-proof execution, EExdI confirmed by ATEX certificate issued by KD "BARBARA".

Depending on clients' requirements dSKgw motors can be adjusted to 1000V, 1140V and 3300V which gives the opportunity to use them both in Polish and in foreign mines.

The motors are cooled with water flowing through ducts in the frame and end shields. Water inlets are placed on the frame next to the terminal box. The water supply is realized by the special connection which consists of armoured hose screwed into the threaded socket and then mounted with a special bush.

EExd I acc. to EN 50014
acc. to EN 50018

The motor is equipped with the mechanical overload protection - a safety shaft placed in shaft's hole and which has a contraction and additional notch. Functioning of protection consists in twisting the shaft in notch area that stops the driven machine without damaging the motor.
